## ABSTRACT

This advance report highlights the findings of surveys taken in Chicago, Detroit, Los Angeles, New York, and Philadelphia as part of the National Crime Panel, a new instrument for measuring levels of crime both nationwide and in selected large cities. Conducted for the Law Enforcement Assistance Administration by the U.S. Bureau of the Census, the panel, relying on scientific sampling procedures, gauges the extent to which individuals age 12 and over, households, and commercial establishments have been victimized by certain types of crimes. It examines the characteristics of victims and, where possible, explores such facets of victimization as the relationship between victim and offender, the time and place of occurrence, the injury or loss suffered, and whether or not the event was reported to the police. Carrial out in the first quarter of 1973, the surveys covered victimizations that occurred during the previous 12 months. In each city, about 10,000 households (some 22,000 persons) and approximately 2,000 commercial establishments comprised the sample. The information presented in this report reflects only those victimizations incurred by the residents and commercial firms of each city, even though certain inciderts may have taken place outside the city. Victimizations of nonresidents, such as suburban commuters and visitors, did not fall within the scope of the surveys. All data from the survey are estimates. (Author/JM)

### FOREWORD

This advance report highlights the findings of surveys taken in Chicago, Detroit, Los Angeles, New York, and Philadelphia as part of the National Crime Panel, a new instrument for measuring levels of crime both nationwide and in selected large cities. Conducted for the Law Enforcement Assistance Administration by the U.S. Bureau of the Census, the Panel, relying on scientific sampling procedures, gauges the extent to which individuals age 12 and over, households, and commercial establishments have been victimized by certain types of crimes. It examines the characteristics of victims and, where possible, explores such facets of victimization as the relationship between victim and offender, the time and place of occurrence, the injury or loss suffered, and whether or not the event was reported to the police. Because the Panel measures victimizations not reported to the police, in addition to those that come to official attention, it is expected to produce rates of victimization higher than those previously documented.

Carried out in the first quarter of 1973, the surveys covered victimizations that occurred during the previous 12 months. In each city, about 10,000 households (some 22,000 persons) and approximately 2,000 commercial establishments comprised the sample. Although respondents were asked about a variety of events, only certain crimes were selected for measurement. For individuals, these were rape, robbery, assault, and personal larceny; for households, burglary, larceny, and auto theft; and for commercial establishments, burglary and robbery.

The information presented in this report reflects only those victimizations incurred by the residents and commercial firms of each city, even though certain incidents may have taken place outside the city. Victimizations of nonresidents, such as suburban commuters and visitors, did not fa'l within the scope of the surveys. All data from the surveys are estimates and are subject to errors arising from sampling. A more comprehensive report, under preparation, will include data concerning sampling errors and additional technical details about the surveys.

## GENEPAL FINDINGS

Nearly 3.2 million criminal acts of violence and common theft, including attempts, took place in the Nation's five largest cities during 1972 (Table 1), as ascertained by the National Crime Panel surveys. Slightly less than half of these were carried out against individuals, approximately two-fifths were committed against households, and roughly 15 percent were directed against commercial establishments. Crimes of theft constituted a majority of all incidents against persons; about one—third of all personal incidents were of a violent nature. Moreover, in at least three-fourths of the personal incidents involving violence or the threat of violence, the confrontation was between strangers, i.e., between the victim or victims and one or more unknown assailants. Burglary was the most commonplace household and commercial crime.

In all five cities, the level of criminal activity, as determined by the surveys, was appreciably higher than had previously been measured. The total number of incidents reported by survey respondents was roughly double the combined number of comparable offenses recorded by law enforcement authorities in the five cities during 1972. Among the various types of crimes measured, auto theft came closest in relative terms to matching the total reflected in official records. By contrast, the number of larcenies, both personal and household, was nearly four times greater than the number that had come to official attention.

Despite some significant intercity variations in rates for specific types of victimizations, patterns of personal victimization in the five cities generally were similar (Table 2). The victimization rate for crimes of personal theft was higher in each city than the rate for crimes of personal violence. Personal larceny without contact was by far the most prevalent type of crime in all five cities; rape was the least common. All cities registered a rate for robbery and attempted robbery

<sup>\*</sup> Rates used in this report were computed on the basis of the number of victimizations rather than on the number of incidents. Because there may be more than one victim during any given crime against persons, the number of victimizations may be greater than the number of incidents.

without injury that was two to four times higher than that for robbery and attempted robbery with injury. In relative terms, the rates for aggravaced assault and simple assault diverged less in each city, although in all five the combined rate for attempted assault, with or without a weapon, was about two times higher than the combined rate for assaults, both aggravated and simple, that were actually carried out.

As indicated, certain rajor variations in victimization rates occurred among the cities. The overall rate for robbery was lower in Los Angeles (16 per 1,000 population age 12 and over) than in the other four cities, where it ranged from 24 to 32 per 1,000. New York had by far the lowest overall rate for assault (11 per 1,000), and its rate for personal larceny without contact (37 per 1,000) was less than one-half that of Los Angeles, Detroit, and Philadelphia and about one-half that of Chicago. Los Angeles had a lower rate than the other four cities for personal larceny with contact.

Personal victimization rates for selected groups (Tables 3a through 3e) produced some patterns common at least to a majority of the five cities. For most types of victimization, males had higher rates than females. Also, persons under age 35 were more likely to have been victimized than those age 35 or older. Minority races, including blacks, had significantly higher victimization rates than whites for such offenses as robbery and aggravated assault; the rates for aggravated and simple assault were higher among persons never married than among persons married, widowed, divorced, or separated. Persons from families with incomes of less than \$10,000 had a higher rate of victimization for robbery, as well as for personal larceny with contact, than their more affluent counterparts. On the other hand, the rate for larceny without contact tended to rise with the level of family income.

For robbery and assault, the proportion of personal victimizations committed by strangers was highest in New York. For rape, it was higher in New York than in Detroit, but the differences between New York and the other three cities were not statistically significant. The tabulation below gives for each city the percentage of rape, robbery, and assault victimizations involving strangers.

	Rape	Robbery	Assault
Chicago	81	94	74
Detroit	71	92	66
Los Angeles	77	89	68
New York	91	97	85
Philadelphia	76	93	74

Of the three types of household victimizations, as classified for the National Crime Panel surveys, burglary produced the highest rate in all five wities, followed in order by household larceny and auto theft (Table 4). Detroit had the highest rate for burglary (174 per 1,000 households) and auto theft (49 per 1,000). Los Angeles the highest for household larceny (131 per 1,000). New York ranked fifth in all three classifications; in fact, its rate for burglary was about two-fifths that of Detroit and its rate for household larceny was one-fourth that of Los Angeles. In each city, the rate for burglary involving forcible entry was higher than that involving unlawful entry without force; it was about twice as high in Detroit and Philadelphia.

In all five cities, households headed by members of minority races were more likely than white households to have been burglarized and, except in New York, they were also more apt to have had their car stolen (Tables 5a through 5e). Households headed by individuals age 65 or over had the lowest rate for household victimization. The larger households, i.e., those with four or more members, had higher rates than their smaller counterparts. With some exceptions, victimization rates for household larceny and auto theft rose with the level of family income, but there was no clear pattern with respect to burglary. There was also no apparent correlation between the rates of victimization and the number of housing units in buildings occupied by the victimized households.

Commercial establishments in the five cities were victims of a total of about 470,000 burglaries and robberies. In each city, burglaries of commercial establishments outnumbered robberies, by amounts ranging from 3:1 and 7:1. Victimization rates for burglaries of commercial

firms were roughly comparable in four cities (Table 6), averaging about 340 per 1,000 commercial establishments. In Detroit, however, the rate was approximately 600 per 1,000. Detroit also had the highest victimization rate for robbery of commercial firms; Los Angeles had the lowest. Among commercial establishments of differing size, as measured by the amount of receipts, a clear pattern of victimization failed to emerge. Except in Chicago, retail establishments generally had higher victimization rates for both burglary and robbery than other kinds of businesses (Tables 7a through 7e).

Among the cities there emerged a fairly uniform pattern of whether or not victimizations were reported to police authorities (Table 8), despite some intercity differences with respect to specific offenses. In general, crimes against individuals were least well reported, although crimes of personal violence were more frequently brought to police attention than crimes of personal theft. Trimes against households were more often reported to authorities than crimes against persons; crimes in which commercial establishments were targets were the most likely of all crimes to be brought to the attention of the police Attempted victimizations were also far less apt to be reported than victimizations which were completed. Personal larceny without contact and household larceny were crimes least likely to come to official attention. On the other hand, household burglaries involving forcible entry and the loss of property, thefts of motor vehicles, and commercial burglaries and robberies carried through to completion were brought to the attention of the police in at least two-thirds of all instances.

In each city, the most commonly cited reasons given for not reporting a personal or household crime to the police were a belief that, because of lack of proof, nothing could be accomplished by reporting the incident, and a feeling that the incident was not sufficiently important to merit police attention. The tabulation below gives the percentage distribution of reasons advanced for not reporting personal and household victimizations:

	Personal	Household
Nothing could be done; lack of proof	34	37
Not important enough	28	. 31
Police would not want to be bothered	8	9
Too inconvenient	5	4
Private or personal matter	4	3
Afraid of reprisal	2	1
Reported to someone else	7	3
Other or not available	12	12

As is shown, a belief that the police would not wish to be bothered accounted for less than one-tenth of all reasons cited for not notifying the police of a crime. Reasons for failure to report commercial victimizations formed a pattern somewhat similar to those given for failure to report personal and household incidents.

## DEFINITIONS

Assault—Unlawful physical attack by one person upon another. Aggravated assault includes all attacks resulting in serious injury, as well as attacks with a weapon which result in injury. It also includes attempted assault with a weapon. Simple assault includes an attack without a weapon resulting in minor injury and attempted assault without a weapon.

Auto theft-Stealing or unauthorized taking of a motor vehicle, including attempted theft.

Burglary—Unlawful or forcible entry of a home or commercial establishment, usually, but not necessarily, attended by theft. Forcible entry, including attempts, occurs when force is used to gain entry, e.g., breaking a window or slashing a screen. Unlawful entry occurs when the structure is entered by anyone who has no legal right to be there even though force is not used.

Household larceny—Theft and attempted theft of property or cash within, outside, or near the home that does not involve forcible entry or unlawful entry.

<u>Incident</u>—A specific criminal act involving one or more victims and one or more offenders.

Personal larceny with contact—Theft of purse, wallet, or cash directly from the person of the victim, including attempted purse snatching.

<u>Personal larceny without contact</u>—Theft, without contact between victim and offender, of personal property or cash from any place other than the victim's home or its immediate vicinity.

Rape—Carnal knowledge through the use of force or the threat of force, including attempted rape. Statutory rape (without force) is excluded.

Robbery—Theft and attempted theft, directly from a person or commercial establishment, of property or cash by force or threat of force, with or without a weapon. Robbery with injury includes attacks resulting either

in serious or minor injuries, as well as attempted robbery with a weapon.

Robbery without injury involves the threat of harm.

Victimization—A specific criminal act as it affects a single victim. In criminal acts against persons, the number of victimizations is determined by the number of victims of such acts. Each criminal act against a household or commercial establishment is assumed to involve a single victim, the affected household or establishment.
